Chandler

Chandlers are known around the world and are highly prized by buyers for their extra light and high quality kernels. Harvested mid to late season, Chandlers provide one of the highest kernel yields of any of the varieties.

Characteristics	: Inshell Chandler Walnuts
Color	: Light
Shell	: Thin
Yield	: Typically 48%-51%
Flavor	: Mild
Halves Yield	: High percentage

Howard

Howard is large, round, smooth nut that has a good seal and is harvested in mid-season. Well known for its light nutshell color and attractive natural appearance. The Howard walnut features a large, light kernel that provides outstanding flavor. Howard walnuts rank among the top six varieties grown in California.

Characteristics	: Inshell Howard Walnuts
Color	: Light, though not as light as Chandler
Shell	: Somewhat thin, thicker than Chandler
Yield	: Typically 48%-52%
Flavor	: Has more natural flavor than Chandler
Halves Yield	: High, not as high as Chandler due to its thicker Shell

Tulare

The Tulare walnut is an increasingly popular inshell variety, known for its high yield. Tulares are harvested in mid season.

Serr

Serr, is mostly a Chilean Product. It harvests in mid of March.

Characteristics : Inshell Tulare Walnuts

Color	: Light when first shelled, but turns light amber over time
Shell	: Somewhat thin but thicker than Chandler
Yield	: High -- typically 50-53%
Flavor	: Has more natural flavor than Chandler
Halves Yield	: Good, though not as high as Chandler or Howard

Characteristics : Inshell Serr Walnuts

Color	: Light when first shelled then amber
Shell	: Thin but thicker than Chandler
Yield	: %50-53
Flavor	: More natural flavour than chandler
Halves Yield	: High as Chandler & Howard
